DS311 - R Lab Assignment

Seyoung Kim

3/26/2023

R Assignment 1

- In this assignment, we are going to apply some of the build in data set in R for descriptive statistics analysis.
- To earn full grade in this assignment, students need to complete the coding tasks for each question to get the result.
- After finished all the questions, knit the document into HTML format for submission.

Question 1

Using the **mtcars** data set in R, please answer the following questions.

```
# Loading the data
data(mtcars)

# Head of the data set
head(mtcars)
```

```
##                    mpg cyl disp  hp drat    wt  qsec vs am gear carb
## Mazda RX4         21.0   6  160 110 3.90 2.620 16.46  0  1    4    4
## Mazda RX4 Wag     21.0   6  160 110 3.90 2.875 17.02  0  1    4    4
## Datsun 710        22.8   4  108  93 3.85 2.320 18.61  1  1    4    1
## Hornet 4 Drive    21.4   6  258 110 3.08 3.215 19.44  1  0    3    1
## Hornet Sportabout 18.7   8  360 175 3.15 3.440 17.02  0  0    3    2
## Valiant           18.1   6  225 105 2.76 3.460 20.22  1  0    3    1
```

a. Report the number of variables and observations in the data set.

```
# Enter your code here!
var<-dim(mtcars)[1]
obser<-dim(mtcars)[2]

# Answer:
print(paste("There are total of",var,"variables and ",obser,"observations in this data set."))
```

```
## [1] "There are total of 32 variables and  11 observations in this data set."
```

b. Print the summary statistics of the data set and report how many discrete and continuous variables are in the data set.

```
# Enter your code here!
summary(mtcars)
```

```
##       mpg             cyl             disp             hp

```

```
# Answer:

#discrete:cyl, vs,am,gear,carb
#continuous: mpg,disp,hp, drat,wt,qsec
print("There are 5 discrete variables and 6 continuous variables in this data set.")
```

```
## [1] "There are 5 discrete variables and 6 continuous variables in this data set."
```

c. Calculate the mean, variance, and standard deviation for the variable **mpg** and assign them into variable names m, v, and s. Report the results in the print statement.

```
# Enter your code here!

m <- mean(mtcars$mpg)
v <- var(mtcars$mpg)
s <- sd(mtcars$mpg)

print(paste("The average of Mile Per Gallon from this data set is ",m  , " with variance ",  v, " and s
```

```
## [1] "The average of Mile Per Gallon from this data set is  20.090625  with variance  36.3241028225806
```

d. Create two tables to summarize 1) average mpg for each cylinder class and 2) the standard deviation of mpg for each gear class.

```r
# Enter your code here!

install.packages("magrittr") # package installations are only needed the first time you use it
```

```
## Installing package into 'C:/Users/alluo/AppData/Local/R/win-library/4.2'
## (as 'lib' is unspecified)

## package 'magrittr' successfully unpacked and MD5 sums checked

## Warning: cannot remove prior installation of package 'magrittr'

## Warning in file.copy(savedcopy, lib, recursive = TRUE): problem copying
## C:\Users\alluo\AppData\Local\R\win-library\4.2\00LOCK\magrittr\libs\x64\magrittr.dll
## to

## Warning: restored 'dplyr'

##
## The downloaded binary packages are in
##  C:\Users\alluo\AppData\Local\Temp\RtmpyyKPDP\downloaded_packages
```

```r
library(magrittr) # needs to be run every time you start R and want to use %>%
```

```
## Warning: package 'magrittr' was built under R version 4.2.3
```

```
library(dplyr)
```

```
## Warning: package 'dplyr' was built under R version 4.2.3
```

```
##
## Attaching package: 'dplyr'
```

```
## The following objects are masked from 'package:stats':
##
##     filter, lag
```

```
## The following objects are masked from 'package:base':
##
##     intersect, setdiff, setequal, union
```

```
mtcars %>%
  group_by(cyl) %>%
  summarize(AVGMPG=mean(mpg))
```

```
## # A tibble: 3 x 2
##     cyl AVGMPG
##   <dbl>  <dbl>
## 1     4   26.7
## 2     6   19.7
## 3     8   15.1
```

```
mtcars %>%
  group_by(gear) %>%
  summarize(AVGMPG=mean(mpg))
```

```
## # A tibble: 3 x 2
##    gear AVGMPG
##   <dbl>  <dbl>
## 1     3   16.1
## 2     4   24.5
## 3     5   21.4
```

e. Create a crosstab that shows the number of observations belong to each cylinder and gear class combinations. The table should show how many observations given the car has 4 cylinders with 3 gears, 4 cylinders with 4 gears, etc. Report which combination is recorded in this data set and how many observations for this type of car.

```
Cyl<-mtcars$cyl
Gear<-mtcars$gear

table(Cyl,Gear)
```

```
##    Gear
## Cyl  3  4  5
##   4  1  8  2
##   6  2  4  1
##   8 12  0  2
```

```
print("The most common car type in this data set is car with 8 cylinders and 3 gears. There are total o
```

```
## [1] "The most common car type in this data set is car with 8 cylinders and 3 gears. There are total
```

Question 2

Use different visualization tools to summarize the data sets in this question.

a. Using the **PlantGrowth** data set, visualize and compare the weight of the plant in the three separated group. Give labels to the title, x-axis, and y-axis on the graph. Write a paragraph to summarize your findings.

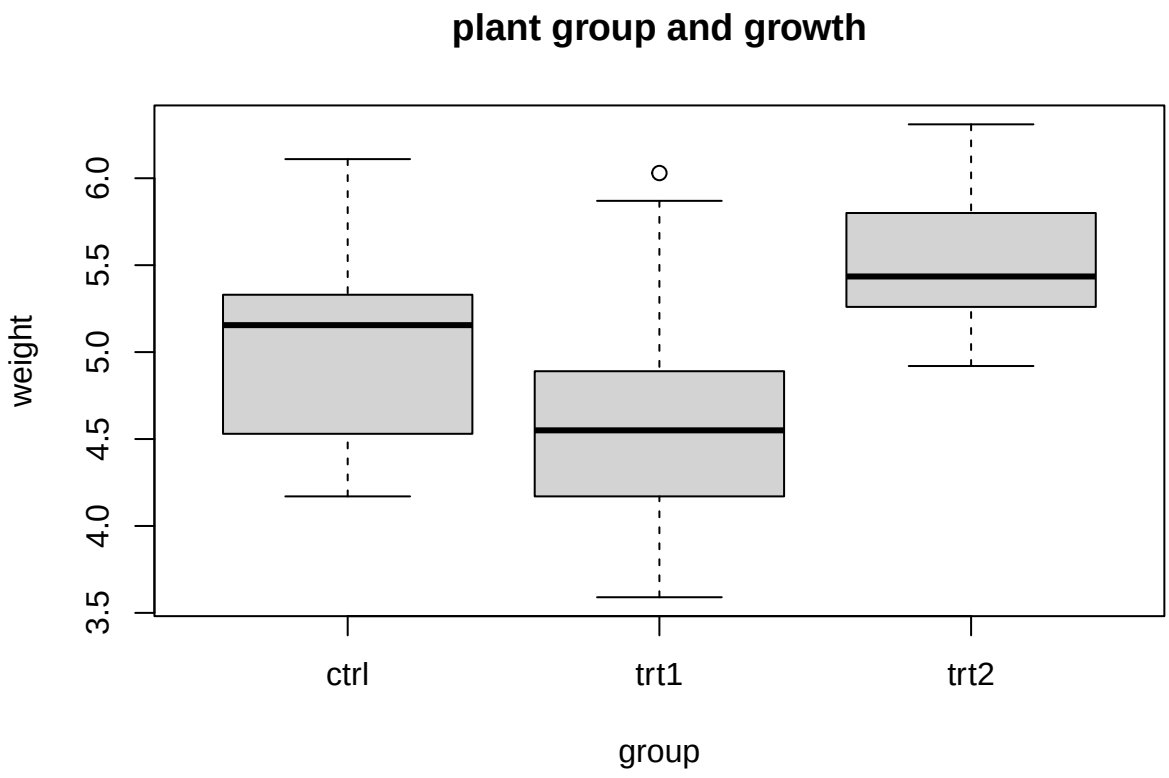
```
# Load the data set
data("PlantGrowth")

# Head of the data set
head(PlantGrowth)
```

```
##   weight group
## 1   4.17  ctrl
## 2   5.58  ctrl
## 3   5.18  ctrl
## 4   6.11  ctrl
## 5   4.50  ctrl
## 6   4.61  ctrl
```

```
# Enter your code here!

boxplot(weight ~ group, data = PlantGrowth,main="plant group and growth",xlab="group",ylab="weight")
```

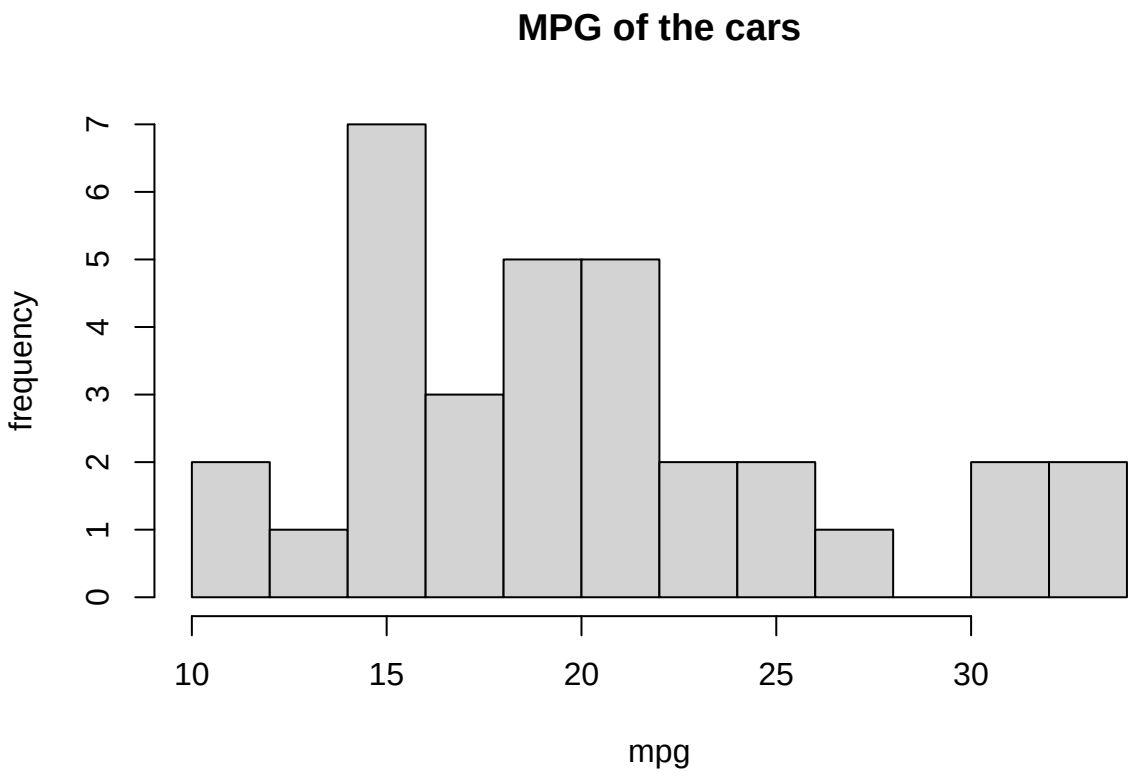


Result:

=> Report a paragraph to summarize your findings from the plot! The tallest group is trt2, and the shortest group is trt1. The trt1 group has the greatest variability in weight, while the trt2 group has the least variability in weight.

b. Using the **mtcars** data set, plot the histogram for the column **mpg** with 10 breaks. Give labels to the title, x-axis, and y-axis on the graph. Report the most observed mpg class from the data set.

```
hist(mtcars$mpg,breaks=10,main="MPG of the cars",xlab="mpg",ylab="frequency")
```



```
print("Most of the cars in this data set are in the class of 15 mile per gallon.")
```

```
## [1] "Most of the cars in this data set are in the class of 15 mile per gallon."
```

c. Using the **USArrests** data set, create a pairs plot to display the correlations between the variables in the data set. Plot the scatter plot with **Murder** and **Assault**. Give labels to the title, x-axis, and y-axis on the graph. Write a paragraph to summarize your results from both plots.

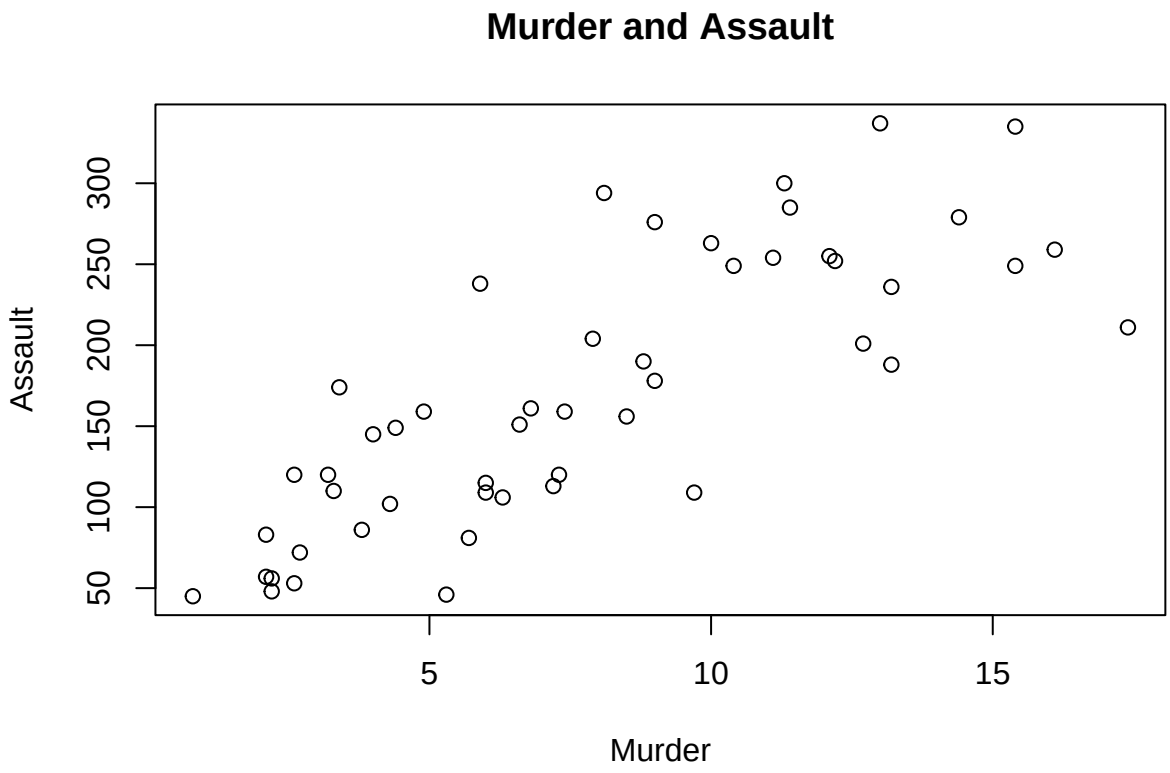
```
# Load the data set
data("USArrests")

# Head of the data set
head(USArrests)
```

```
##            Murder Assault UrbanPop Rape
## Alabama      13.2     236       58 21.2
## Alaska       10.0     263       48 44.5
## Arizona       8.1     294       80 31.0
## Arkansas      8.8     190       50 19.5
## California    9.0     276       91 40.6
## Colorado      7.9     204       78 38.7
```

```
# Enter your code here!

plot(USArrests$Murder,USArrests$Assault,main="Murder and Assault",xlab="Murder",ylab="Assault")
```



Result:

=> Report a paragraph to summarize your findings from the plot! As the value of Murder increases, there is a tendency for the value of Assault to also increase.

Question 3

Download the housing data set from www.jaredlander.com and find out what explains the housing prices in New York City.

Note: Check your working directory to make sure that you can download the data into the data folder.

```
# Load and clean the housing data set
 wd1 <- getwd()
 paste("Current Working Directory: ", wd1)
```

```
## [1] "Current Working Directory:  C:/Users/alluo/Documents"
```

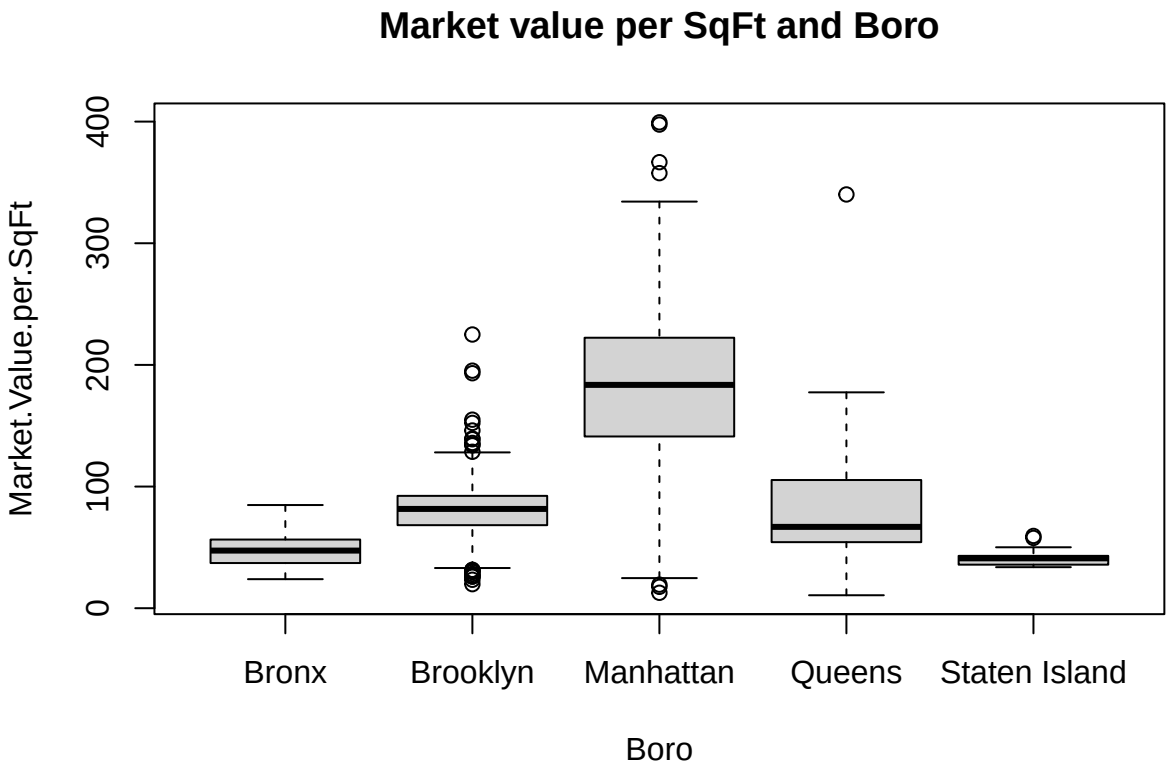
```r
# Load and clean the housing data set
download.file(url='https://www.jaredlander.com/data/housing.csv',
              destfile='data/housing.csv', mode='wb')
housingData <- read.csv('./data/housing.csv')
housingData <- subset(housingData,
                      select = c("Neighborhood", "Market.Value.per.SqFt", "Boro", "Year.Built"))
housingData <- na.omit(housingData)
```

a. Create your own descriptive statistics and aggregation tables to summarize the data set and find any meaningful results between different variables in the data set.

```r
# Head of the cleaned data set
head(housingData)
```

```
##   Neighborhood Market.Value.per.SqFt      Boro Year.Built
## 1    FINANCIAL                200.00 Manhattan       1920
## 2    FINANCIAL                242.76 Manhattan       1985
## 4    FINANCIAL                271.23 Manhattan       1930
## 5      TRIBECA                247.48 Manhattan       1985
## 6      TRIBECA                191.37 Manhattan       1986
## 7      TRIBECA                211.53 Manhattan       1985
```

```r
# Enter your code here!
boxplot(Market.Value.per.SqFt ~ Boro,main="Market value per SqFt and Boro", data = housingData,xlab="Bo
```



b. Create multiple plots to demonstrates the correlations between different variables. Remember to label all axes and give title to each graph.

```
# Enter your code here!
install.packages("ggplot")
```

```
## Installing package into 'C:/Users/alluo/AppData/Local/R/win-library/4.2'
## (as 'lib' is unspecified)

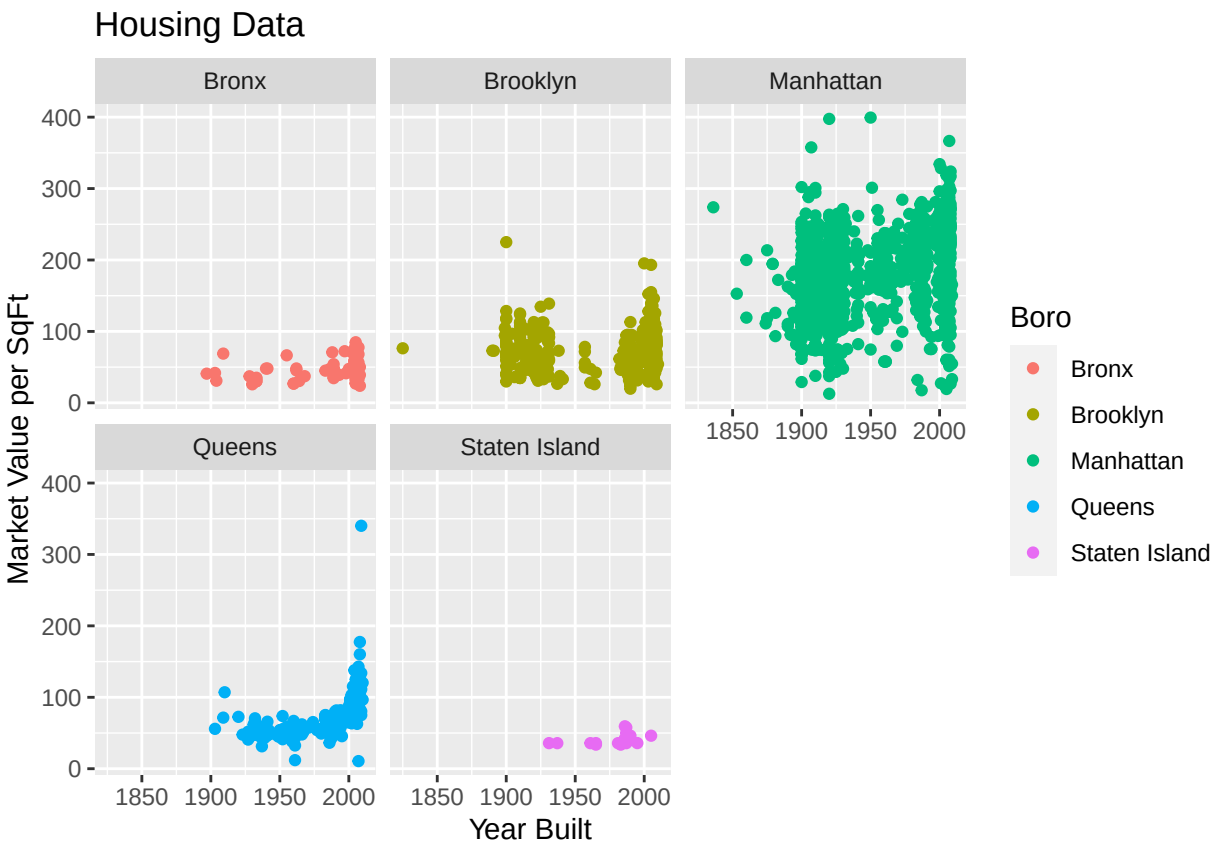
## Warning: package 'ggplot' is not available for this version of R
##
## A version of this package for your version of R might be available elsewhere,
## see the ideas at
## https://cran.r-project.org/doc/manuals/r-patched/R-admin.html#Installing-packages
```

```
library(ggplot2)
```

```
## Warning: package 'ggplot2' was built under R version 4.2.3
```

```
g<-ggplot(housingData,aes(x=Year.Built,y=Market.Value.per.SqFt))+ geom_point(aes(color=Boro))

g+ facet_wrap(~Boro)+ labs(x = "Year Built", y = "Market Value per SqFt", title = "Housing Data")
```



c. Write a summary about your findings from this exercise.

=> I used plot,boxplot,hist functions to visualize data. Also, I used facet_wrap function to categorize the data by Boro.
